ABSTRACT

Predicting credit worthiness of clients in banking is a very important issue. Large datasets with numerous variables must be analyzed for this activity. In this study, real bank credit data was utilized to predict a customer's creditworthiness using three distinct Machine Learning algorithms. We analyze which algorithms perform best for the given dataset. The dataset used for this research is "default of credit card clients" taken from the UCI Machine Learning Repository. There are 23 total features in the dataset. The proportions of clients considered "good" and "bad" are often not balanced. We have applied different techniques like Under-Sampling and Over-Sampling and SMOTE to work with imbalanced data to get the best results for each of the algorithms we have used. Each of the Machine Learning Classifiers we utilize is paired with a variety of feature selection strategies and data balance techniques. After analyzing a dataset from a retail credit bank, we determined that the most effective approach is to use Extra Trees in conjunction with Random Over-Sampling.

Keywords: Creditworthiness, Machine Learning, Credit card, imbalanced data, Under-Sampling, Over-Sampling, SMOTE.

TABLE OF CONTENTS

Chapter 1 Introduction	1
1.1 History:.....	1
1.1 Background:	2
1.2 Problem Statement:	2
1.3 Objectives:	3
1.4 Significance of the Study:	4
1.5 Scope and Limitations:.....	5
1.6 Hypothesis:.....	6
1.7 Overview:.....	6
1.8 Approach:	7
1.9 Thesis Layout:.....	8
Chapter 2 Literature Review.....	9
2.1 Overview of Creditworthiness Prediction:.....	10
2.2 Machine Learning (ML):	10
2.2.1 Machine Learning (ML) Applications:.....	11
2.3 Credit Scoring Model:.....	12
2.4 AI Techniques:	13
2.5 Related Work:	14
Chapter 3 Preliminaries.....	16
3.1 Working of Machine Learning (ML):.....	17

3.2 Types of Machine Learning (ML):	17
3.3 Selecting the Best Machine Learning (ML) Model:	18
3.4 Classification Algorithms:	19
3.4.1 Logistic Regression (LR):	19
3.4.2 Decision Tree (DT) Classifier:	22
3.4.3 Extra Trees (ET) Classifier:.....	24
3.5 Scaling:.....	26
3.6 Cross Validation (CV):	27
3.6.1 K-fold Cross-Validation:	27
3.7 Evaluation Criteria:	28
3.8 Imbalanced Data:	29
3.8.1 Techniques for handling imbalanced data:.....	30
3.8.2 Ensemble Approaches:	32
Chapter 4 Proposed Method	33
4.1 Experimental Setup:.....	34
4.1.1 Data collection:.....	34
4.1.2 Preprocessing of Data:.....	35
4.1.3 Feature Extraction:.....	43
4.1.4 Model Training:	43
4.1.5 Cross Validation:	44
4.1.6 Model Evaluation:	44

4.1.7 Handling Imbalanced Data:	44
4.1.8 Model Prediction:	45
Chapter 5 Implementation and Results.....	46
5.1 Implementation of Machine Learning (ML) Models:.....	47
5.1.1 Implementation of Logistic Regression (LR):.....	48
5.1.2 Implementation of Extra Trees (ET) Classifier:	49
5.1.3 Implementation of Decision Tree (DT) Classifier:	50
Chapter 6 Comparison.....	51
Conclusion	55
Future Work	58
References	60
Annexure A	63
Annexure B.....	66
